

Piscine Discovery

Rush

Staff 42 piscine@42.fr

Summary: Create a responsive one-page resume site with a fixed navigation bar, using a CSS framework.

Version: 3.0

Chapter I

Foreword

Gollum : What has he done? Stupid Hobbit! You are damaging them.

Sam : Damaging what? They've got almost no meat. What we need are potatoes.

Gollum : What are potatoes my precious? What are they?

Sam : Potatoes you idiot! Broiled, mashed, fried, sliced or boiled with sauce. Nice fat sliced and fried in oil to go with fried fish. Even you won't resist.

Gollum : Oh but we will resist. To waste perfect fish like that... We prefer fish raw and alive, keep your nasty fries.

Sam : You are impossible.

Chapter II

General instructions

Unless explicitly specified, the following rules will apply every day of this Piscine.

- This document is the only reliable source. Do not trust any rumors.
- This document may be updated up to one hour before the submission deadline.
- The assignments in this document must be completed in the given order. Later assignments will not be evaluated unless all previous ones are perfectly completed.
- Pay attention to the access rights of your files and folders.
- Your assignments will be evaluated by your Piscine peers.
- All shell assignments must run using `/bin/bash`.
- You must not include any files in your submission other than those explicitly requested by the assignments.
- Have a question? Ask your neighbor to the left. Otherwise, try your neighbor to the right.
- Every technical answer you might need is available in the `man` pages or on the Internet.
- You must read the examples thoroughly. They may reveal requirements that are not obvious in the assignment's description.
- By Thor and Odin! Use your brain!!!!

Chapter III

Mandatory part

	Exercise00
Rush	
Directory: <i>ex00/</i>	
Files to Submit: All necessary files for your resume website	
Authorized: All	

Following your first week of web training, on this last day you will have to create a mini showcase website with resume pages for you and your teammate. For those who don't know what a one-page site is, check out the list of sites present [here](#).

Your website should have:

- An index/home page with links to navigate to the two resume pages
- Two separate resume pages (one for each team member)

Your first page will simply be a summary to go to the two CVs with two links.

All pages must be responsive and visually appealing! The use of css framework like bootstrap is strongly advised.

A resume page must have at least:

- **A navigation bar** : You must implement your own navigation bar (with several links to move around your page easily). This bar must point to at least 3 parts of your resume. Finally this bar must remain fixed during your navigation on the page.
- **Three parts**: You must implement 3 parts in your resume.
- **A first part**: which will display simple content with a photo, a name and a job title.
- **A second part**: which will display the professional experiences and skills of the person.

- **A last part:** with links to contact the person.

You are free to arrange the content. We strongly advise you to use templates to help you.

Here is an example of a navigation bar:

Here is an example of a home page:

Chapter IV

Submission and peer-evaluation

- In the `discovery_piscine` folder at the root of your home, create a new `rush` folder and navigate to it.
- For this day your rendering file will be in the `rush` folder.
- You need to put an author file in the root of your rendering folder containing your logins, each on one line, and followed by a `'\n'`:

```
$>cat -e auteur
xlogin$
ylogin$
$>
```

Please note, during your defense anything that is not present in the folder for the day will not be checked.
